

Justin Martin

Front-end Developer / UI/UX Designer

justinmartin@gmail.com / 1 (403) 701-4255 / justinmartin.ca

As a front-end developer with a strong design background, I pay attention to details that most developers miss or don't understand the importance of. I combine my experience as a designer with my technical knowledge of front-end development to make sure the things I build are as functional as they are eye catching.

I am endlessly curious about the constant advancement of the digital world and spend many of my off hours learning new techniques and improving my skill set. I have built many side projects for the sole purpose of learning a new framework or service.

I have spent a large portion of my career as a freelancer and as a result of that, spent a lot of time collaborating with other developers, designers, project coordinators and clients directly. I believe I have developed not only the skills to be great at what I do but the skills to work seamlessly with others who are also great at what they do.

Experience

Communo

Front-end Developer | 2020

Communo is a hybrid mobile application based on Capacitor JS. During my time working on Communo's app I was in charge of architecting a styling scaffold that allowed the app to be built rapidly and efficiently as well as maintaining the build pipeline and of course contributing to the functionality and architecture of the app.

Scheme Designs

Front-end Developer / UI/UX Designer | 2014 - 2020

As a freelancer I wore many hats and was responsible for many facets of every project from beginning to end. I had to be self motivated and capable of handling my own time and project management.

I would start off projects by creating an information architecture, wireframes, design, both front-end and backend development and the final integration into a CMS for client editing. I had the opportunity to work with a wide range of clients including Imagewear, Princess Auto, Rocky Mountain Soap, Wholesale Sports and Home Depot.

Fuse Creative Communications

Art Director / Front-end Developer | 2008 - 2014

In addition to web development at Fuse I was also heavily involved with concepting and executing on marketing campaigns, corporate branding, event promotion and publication layout.

Skills

Wireframing, UI/UX design, HTML, CSS, vanilla JavaScript, Typescript, React, Vue, custom PHP development (Laravel, WordPress)
